physician's OHIP#:
physician's signature:

#### CLINICAL INFORMATION:

Joint or area of pain including side (Left or Right):
Current medical history:
Past surgeries:
Allergies to medications:
Current medications:
Current or past occupation:
Special requests (viscosupplement, PRP, ultrasound guidance):

**Please note:** Attach available imaging (xray and/or ultrasound). We do not inject spine (no epidural injections, no facet joint injections, no nerve blocks for pain). We recommend that patients try physiotherapy for arthritis first. Ultrasound guided injections may incur extra fee if not in OHIP schedule of fees. We dispense own medications combinations on site, no need to prescribe. Until mid 2023 FHO physicians may incur partial outside use fees. Our response time to referrals is typically one working day with same week appointments.

Fore reference: most common interventions include the following landmark and ultrasound guided injections:

- **knee:** arthritis, knee effusion, Baker's cyst
- **shoulder:** arthritis and tendonitis, rotator cuff tendonitis and tear related pain, frozen shoulder
- **elbow:** golfers elbow and tennis player elbow, olecranon bursitis
- **wrist and hand:** carpal tunnel syndrome, De Quervain tenosynovitis, trigger finger, hand and wrist arthritis,
- **back, hip and pelvis:** hip joint, trochanteric bursitis, SI joint dysfunction, trigger point injections
- **foot and ankle:** ankle and foot arthritis, Morton's neuroma
